

Extra Life Rubber Rolls.
for TopHusk™ huller
DRHC and DRHE.

Rubber Rolls.

**WE
CARE
FOR
YOU.**

The Bühler TopHusk is a unique, globally leading paddy rice huller. It is capable of processing up to 120 tonnes of raw material a day and is, therefore, a key rice processing machine. Rubber rolls are the most critical wear parts in the huller and the use of genuine Bühler parts will ensure longer life and high hulling efficiency.

Key Benefits

- High head rice yield
- High hulling degree
- Extra life
- Reduced power usage
- Lower processing cost per tonne

Extra Life Rubber Rolls. for TopHusk™ huller DRHC and DRHE

Why genuine Bühler Rubber Rolls ?

Rolls with aluminium drum: These rolls have optimised dynamic balancing due to their lower weight and good finish of pressure die casting drums. This ensures consistent processing and reduces power usage. To maintain this they are not re-used but may have the benefit of a higher scrap value than mild steel drums.

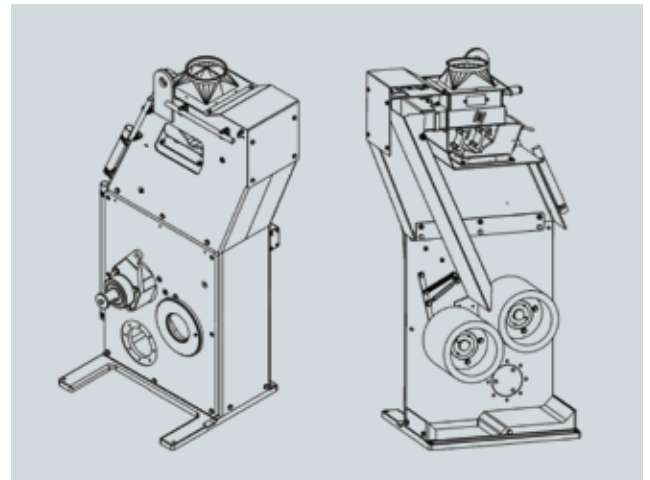

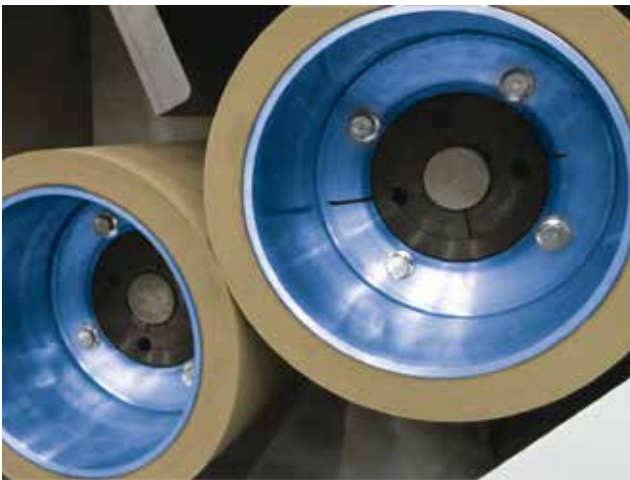

Premium quality specialised rubber: Bühler rolls are made from best quality Nitrile Butadiene rubber (NBR). The rubber material used is scientifically cured to ensure a high degree of heat resistance and so ensure the Bühler huller delivers consistent performance.

Excellent wear resistance: Specially formulated compound has excellent wear resistance at normal operating temperatures.

Bonding ability: Perfect bonding between rubber and shell.

High hulling degree and minimised broken: Well-balanced elasticity and hardness gives high hulling efficiency and a lower percentage of broken.

Maturation: Rubber rolls mature during storage and hence a better performance is obtained from rolls that are 6 months old rather than 3 months from date of manufacture.
